

DMG & Rapid Shape publish material partnership of 3D-dental printing

Dental materials and 3D-printers “Made in Germany” for professional use in laboratories and dental clinics.

- DMG and Rapid Shape publishes their strategic material partnership.
- In close cooperation high-quality dental 3D-printing materials would be suited and validated for Rapid Shape printers in the future
- It is to be expected that both companies will acquire first material parameters for splints and more by IDS 2019 (12. – 16. March 2019, Cologne)

Heimsheim, 24th October 2018:

The material producer DMG and the 3D-printer manufacturer Rapid Shape are bundling their strengths and responsibilities with the announcement for the beginning of their strategic partnership. Whilst DMG produces high-quality photopolymer, Rapid Shape is well-known for the manufacturing of precise, fast and robust printers. In close cooperation, validated materials would be developed for the customer and so Rapid Shapes’ strategy of open systems can be followed up and extended. The intention of the collaboration is to present high-quality 3D-printing material solutions for professional use in laboratories and dental clinics. First highlight and focus of the actual cooperation is the development of a material for splints. It is expected to have the first material parameters for IDS 2019 in Cologne.

About Rapid Shape

Rapid Shape is a German company that specializes in the development and manufacture of high-end systems for additive printing. Rapid Shape has positioned itself as one of this industry’s leaders through proprietary technology that has set new standards in speed, reliability and precision. Rapid Shape provides solutions for industrial, dental, hearing aid and jewellery markets. Precision, quality and cooperation with sales, material and technology partners distinguishes this company from its competitors. For further information about Rapid Shapes 3D-printer please visit
